

Usability Testing

Scenario: You are the Valedictorian of your senior graduating class and are required to give a speech at graduation, but you are very nervous that you might stutter while speaking or forget the speech in front of everyone. You have written your speech in a composition notebook.

Task 1: You will type your speech so it saves in the app and will name the project “Valedictorian Speech”

Task 2: Then, you will practice the “Valedictorian Speech” using the flash card practice choice.

Task 3: Input the desired settings of: Size 12 Font, English Language, Dark Mode, and Easy Mode.

Notes on things to change:

1. Possibly add a feature where you can take pictures of speeches and the app converts it into a word document instead of the two options of uploading and writing the new speech.
2. Make it where the user can change the font style itself too.
3. Allow different settings for different projects instead of the same for all.

Notes on things to keep the same:

1. Keep the beginning and logo screen the same, simple and efficient.
2. Keep the variety of settings that can accustom to many different users.
3. Keep the obvious separate click screen to move to the saved projects and the new project.
